## **RESTRICTION**

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-10 and 25-44, drawn to a memory circuit, classified in class 365, subclass 232.
- II. Claims 11-24 and 45-49, drawn to a delay locked loop (DLL) circuit, classified in Class 327, subclass 158.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination of Group I does not require the subcombination of Group II. For example, invention I has separate utility such as a memory circuit having a DLL circuit whose structure is different from the structure of the DLL circuit in group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2816

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
